THE MEDICAL DEVICE OF CHOICE FOR CRITICAL POST-OPERATIVE KNEE REHABILITATION

The Steadman Clinic

The Steadman Philippon Research Institute

Dr. J. Richard Steadman

Sports Medicine Orthopedic Surgeon
Founder of the Steadman Clinic and
Steadman Philippon Research Institute

"EASY-TO-USE, EFFECTIVE AND DESIGNED WITH THE PATIENT IN MIND."

Endorsed by Dr. Richard Steadman, world-renowned orthopedic surgeon and founder of the *Steadman Hawkins Clinic* and *Steadman Philippon Research Institute*, KneeMD is an easy-to-use device that allows patients to effectively stretch and rotate their knees on their own, without the assistance of a physical therapist.

KneeMD is the first patient-controlled knee rehabilitation device that helps patients who have undergone total knee replacements or other major knee surgeries improve range of motion and stretch in extension.

FOR USE IN THE CLINIC

KneeMD can be used alone, or in combination with other modalities, during physical therapy visits.

In addition to being used to correct range of motion or extension deficits, KneeMD can be used as a supplemental or transition device from continuous passive motion (CPM) devices.

LYING DOWN

SITTING

STANDING, PARTIAL WEIGHT BEARING

AQUATIC THERAPY

FOR USE AT HOME

Patients often lose range of motion between therapy visits. Providing KneeMD as part of a home exercise program helps to optimize gains.

KneeMD gives the patient complete control over their therapy exercises, so they can adjust the frequency, duration and intensity of rehabilitation to minimize pain.

THE MEDICAL DEVICE OF CHOICE FOR CRITICAL POST-OPERATIVE KNEE REHABILITATION

BUILT TO LAST

Constructed of high-grade aluminum and stainless steel, KneeMD is built for all-day, everyday use in a clinical setting. Replacement straps and sanitary strap covers available.

ADJUSTABLE

Easily adjustable straps can be configured in different ways to:

- Facilitate different types of stretches
- Accommodate different leg sizes
- Avoid areas of incision or injury

PORTABLE AND COMPACT

Lightweight, compact and portable, KneeMD is easy to carry and use anywhere, improving compliance, satisfaction and success with rehabilitation therapy.

PROGRESS TRACKER

The Track Bar measures extension from the patient's thigh in order to set goals, track progress and objectively measure gains.

PREFERRED BY PHYSICAL THERAPISTS, SURGEONS AND PATIENTS.

KneeMD is helping patients at top physical therapy clinics regain motion and strength after surgery. By helping patients take ownership of their own rehabilitation, KneeMD is a must-have device for every therapist and surgeon who treats post-operative knee patients.

"Ten out of ten physical therapists who have been introduced to and used KneeMD continue to use it because of its results. We've also seen an increase in physician referrals due to an increase in patient success."

Chris Coghlan

American Professional Baseball Outfielder
Chicago Cubs of Major League Baseball
2009 NL Rookie of the Year

"IT ALLOWS MY KNEE TO GET THAT EXTRA COUPLE OF DEGREES."

By putting the patient in control, KneeMD makes it easy to:

- Maximize range of motion gains
- Improve compliance with a home exercise program
- Increase patient satisfaction with physical therapy

Chris Coghlan, professional baseball player and 2009 NL Rookie of the Year, uses KneeMD before and after every game. He says the device "helps tremendously...it allows my knee to get that extra couple of degrees and puts less stress on my leg. My trainers even pack it on all the road trips."
